2010 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2010, the 2010 Census provides the official counts of the population and housing units for the nation, states, counties, cities and towns.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

	Harford County, Maryland	
	Estimate	Margin of Error
Total:	242,967	+/-1,106
Male:	118,245	+/-1,173
Under 5 years:	7,956	+/-648
With a disability	77	+/-118
No disability	7,879	+/-659
5 to 17 years:	22,782	+/-798
With a disability	1,637	+/-840
No disability	21,145	+/-1,194
18 to 34 years:	24,234	+/-982
With a disability	1,388	+/-624
No disability	22,846	+/-1,118
35 to 64 years:	50,280	+/-981
With a disability	4,067	+/-1,058
No disability	46,213	+/-1,194
65 to 74 years:	8,057	+/-257
With a disability	1,962	+/-634
No disability	6,095	+/-639
75 years and over:	4,936	+/-313
With a disability	2,613	+/-469
No disability	2,323	+/-498
Female:	124,722	+/-1,267
Under 5 years:	6,945	+/-648
With a disability	430	+/-369
No disability	6,515	+/-744
5 to 17 years:	22,811	+/-758
With a disability	343	+/-252
No disability	22,468	+/-750
18 to 34 years:	24,253	+/-1,032
With a disability	1,033	+/-555
No disability	23,220	+/-1,189
35 to 64 years:	53,802	+/-1,050
With a disability	4,669	+/-1,067
No disability	49,133	+/-1,499
65 to 74 years:	9,331	+/-401

	Harford County, Maryland	
	Estimate	Margin of Error
With a disability	1,545	+/-517
No disability	7,786	+/-728
75 years and over:	7,580	+/-448
With a disability	3,323	+/-646
No disability	4,257	+/-597

Explanation of Symbols:

An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.

An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see *Accuracy of the Data*). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the *Evaluation Report Covering Disability*.

While the 2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
